

Managed Endpoint Service

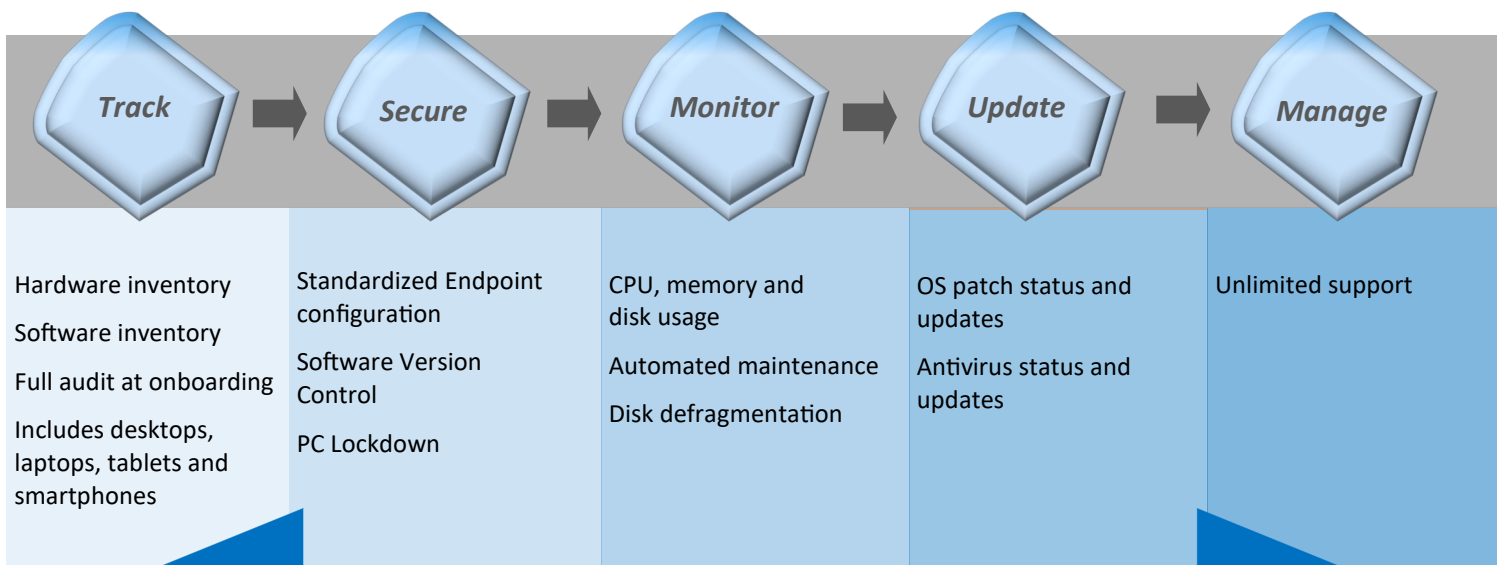

*Your dedicated
virtual helpdesk for all
desktops, notebooks,
tablets and smartphones*

Is your asset footprint growing? How does this impact your business?

When an organization grows, so does its asset footprint. The task of managing IT assets becomes far more challenging as the business expands beyond a handful workstations and adds other endpoints to the mix such as tablets and smartphones. By partnering with Clarotech, the tracking of endpoints, antivirus updates and installed applications is taken care of in a systematic and professional manner.

A comprehensive range of benefits is available to automatically track and manage all of your endpoints, from procurement through to retirement.

Unlimited walk-in, telephonic and remote support for all Active Directory users

Research from Gartner suggests that incomplete and misinformed use of endpoint protection is a common cause of **virus infections**. Successful **ransomware** attacks have exposed the lack of adequate endpoint protection planning and strategy for every size of business.
